Temp at Receipt

Test Enzyme Substrate Quantitation 2000

Date/Time of Analysis 09/06/2018 11:40

Test Method SM 9223B-QT

Analyte
E.coliMPN/100mL
1

■ The water sample tested was found to contain LESS than 235 E. coli per 100mL. This water is considered SUITABLE FOR SWIMMING. This test does not indicate if the water sample is suitable for drinking. Drinking raw water such as an untreated lake, pond or stream is not advised. **NOTE: It is recommended that testing of recreational water begin within 6 to 24 hours of collection for optimal results but testing must begin within 30 hours of collection.

Units of Measurement and Definitions:

mL = milliliter, > equals greater than, MPN = Most Probable Number, CFU = Colony Forming Unit, TNTC = Too Numerous To Count

The test results included on this report meet all National Environmental Laboratory Accreditation Program requirements unless noted otherwise.

Test results relate only to the samples tested and are representative of the samples as they were received at the laboratory.

This is a public record. Information contained in this report may be used for statistical purposes and may be released upon request, pursuant to Vermont

Access to Public Documents law (1 V.S.A. 315-320).

This report shall not be reproduced, except in full, without the written approval of the laboratory.

Test Report Authorized By:

Mary Celotti, Laboratory Director
